TO WHOM IT MAY CONCERN:

During this past year I had the pleasure of working with Rudd Construction Incorporated on a radar project for the Federal Aviation Administration. Their commitment to timely completion of this fast-track, highly visible, and politically sensitive project resulted in commissioning the Aspen, Colorado, Airport Traffic Control Radar Beacon Service on schedule.

Much of the construction took place during difficult winter conditions. Despite the fact that the contract was hastily assembled and a number of design changes were required, with no time extension granted, this company was able to deliver a high quality product at within 10% of the original contract amount. Their positive, can do attitude, along with a totally professional and honest demeanor, assisted us in completing a project which normally would have required two years or more to commission. This facility was dedicated for service less than one year after ground breaking.

I have had very positive feedback from my superiors with regards to the quality of the workmanship on this project. Being that they are also civil engineers and have had field experience on many facilities, I can assure you that their praise is not easily gained-- nor is mine. I would welcome the opportunity to work with Rudd Construction Incorporated in the future. They were very much team players and yet never lost sight of the fact that we were their customer. That attitude made for a very satisfying working relationship.

Sincerely yours,

Kris E. Frame, Civil Engineer
